

British Airways Customer Review Analysis – Insights Report

Business Objective: To analyse passenger review and customer satisfaction

EXECUTIVE OVERVIEW DASHBOARD INSIGHTS:

KPI 1: Total Reviews

Value: 1.324K

Insights

- A total of **1,324 customer reviews** were analyzed, providing a substantial dataset for evaluating passenger satisfaction.
- The large number of reviews increases the reliability of the overall analysis.
- Customer feedback covers multiple aircraft, traveller types, routes, and service categories.
- The dataset provides sufficient information to identify trends in customer experience and service performance.

KPI 2: Average Overall Rating

Value: 4.19 / 10

Insights

- The average overall customer rating is **4.19**, indicating that overall passenger satisfaction is below the midpoint.
- This suggests that customers experienced several service-related issues during their journeys.

- There is significant scope for improving the overall travel experience to increase customer satisfaction.
- Improving lower-rated services such as food and entertainment may help increase the overall rating.

KPI 3: Average Food & Beverages Rating

Value: 2.38 / 5

Insights

- Food and beverage services received an average rating of **2.38**, indicating relatively low customer satisfaction.
- The rating suggests that meal quality, variety, or service consistency may not be meeting passenger expectations.
- Food service is one of the areas requiring immediate attention to improve customer experience.
- Enhancing onboard catering could positively influence overall customer satisfaction.

KPI 4: Average Entertainment Rating

Value: 1.44 / 5

Insights

- The average entertainment rating is **1.44**, making it the lowest-rated service among the KPIs shown.
- This indicates widespread dissatisfaction with the in-flight entertainment experience.
- Customers may have faced limited content, outdated systems, or unavailable entertainment services.
- Improving entertainment quality could significantly enhance the passenger experience, especially on long-haul flights.

KPI 5: Average Cabin Staff Service Rating

Value: 3.28 / 5

Insights

- Cabin staff service achieved an average rating of **3.28**, making it the highest-rated service among the measured service categories.
- This suggests that passengers generally appreciated the professionalism and support provided by the cabin crew.
- Although performance is relatively strong, there is still room to improve consistency and achieve higher satisfaction levels.
- Maintaining high service standards through continuous training will help sustain positive customer experiences.

Chart 1: Review Count by Year

Insights

1. Customer reviews peaked in **2017**, recording the highest number of reviews during the analysis period.
2. Review volume remained relatively stable during **2018–2019** before declining sharply in **2020**.
3. The significant decrease in **2020–2021** may reflect reduced air travel and lower customer activity during that period.
4. Review numbers began recovering in **2022**, indicating a gradual increase in passenger activity.
5. Although review volume improved after 2021, it has not yet returned to the peak levels observed in 2017.

Chart 2: Total Reviews by Recommendation

Insights

1. **56.8% (752 customers)** did **not recommend** the airline.
2. Only **43.2% (572 customers)** recommended the airline.
3. More customers expressed dissatisfaction than satisfaction, indicating a negative recommendation trend.
4. The recommendation rate aligns with the relatively low overall average rating of **4.19**, suggesting that many passengers were not fully satisfied with their experience.
5. Improving low-rated services such as food, entertainment, and seat comfort may help increase customer recommendations.

Chart 3: Review Count by Traveller Type

Insights

1. **Couple Leisure** travellers contributed the highest number of reviews, making them the largest customer segment in the dataset.
2. **Solo Leisure** travellers submitted the second-highest number of reviews, indicating that leisure travellers dominate customer feedback.
3. **Business** travellers contributed a moderate number of reviews, reflecting their importance as a customer segment.
4. **Family Leisure** travellers recorded the fewest reviews among the major traveller categories.
5. Since leisure travellers account for the majority of feedback, improvements targeting this segment are likely to have the greatest impact on overall customer satisfaction.

SERVICE QUALITY ANALYSIS DASHBOARD INSIGHTS

Chart 1: Total Reviews by Aircraft and Food & Beverages

Insights

1. The majority of customer reviews are concentrated among a few aircraft and food rating combinations, indicating that passenger feedback is not evenly distributed across the fleet.
2. Some aircraft consistently receive higher food and beverage ratings, while others show lower customer satisfaction, suggesting variations in catering quality or onboard service.
3. Lower food ratings appear frequently in the dataset, indicating that food and beverage service remains an area requiring improvement.
4. Aircraft with fewer reviews should be interpreted carefully, as a smaller sample size may not accurately reflect overall passenger satisfaction.
5. The variation in food ratings across aircraft highlights the need for standardized catering quality throughout the fleet.

Chart 2: Count of Reviews by Aircraft

Insights

1. The **Airbus A320** received the highest number of customer reviews, indicating that it is one of the most frequently reviewed aircraft in the dataset.
2. The **Boeing 777** ranked second in review volume, followed by the **Airbus A380**, showing that these aircraft also contribute significantly to customer feedback.
3. Aircraft such as the **Boeing 747-400**, **Boeing 777-200**, and **A319** received a moderate number of reviews.

4. Aircraft with fewer reviews, including the **Boeing 787**, have limited customer feedback, making comparisons less reliable.
5. Passenger feedback is concentrated on a few aircraft models, suggesting that improvements on these aircraft could influence overall customer satisfaction.

Chart 3: Count of Reviews by Entertainment Rating

Insights

1. A large number of records are assigned a **-1 entertainment rating**, indicating missing or unavailable entertainment data.
2. Among valid ratings, **1-star entertainment ratings** occur most frequently, suggesting dissatisfaction with the in-flight entertainment experience.
3. Higher entertainment ratings (4 and 5 stars) are less common, indicating opportunities to improve entertainment quality.
4. The rating distribution suggests that entertainment is one of the weaker service areas.
5. Missing entertainment ratings should be investigated to improve data quality and reporting accuracy.

Chart 4: Count of Reviews and Average Seat Comfort by Aircraft

Insights

1. The **Airbus A320** received the highest number of customer reviews, making it the most evaluated aircraft for seat comfort.
2. The **Boeing 777** and **Airbus A380** also received substantial passenger feedback regarding seating comfort.
3. Aircraft with fewer reviews should be interpreted cautiously, as their results are based on limited customer feedback.
4. Differences in seat comfort across aircraft indicate that passenger seating experiences vary within the fleet.
5. Improving seat comfort on frequently used aircraft could have a significant impact on overall customer satisfaction.

Chart 5: Count of Reviews and Average Value for Money by Aircraft

Insights

1. The **Airbus A320** recorded both the highest review count and a significant value-for-money score, making it a key aircraft for evaluating customer perceptions.
2. The **Boeing 777** and **Airbus A380** also contributed a large share of customer feedback regarding value for money.
3. Aircraft with lower review counts provide less reliable information and may require additional customer feedback.

4. Perceived value for money varies across aircraft, suggesting differences in the overall travel experience.
5. Improving service quality on frequently reviewed aircraft can positively influence customers' perception of value for money.

ROUTE & CUSTOMER ANALYSIS DASHBOARD INSIGHTS

Chart 1: Customer Reviews by Country (Map)

Insights

1. Customer reviews are distributed across multiple regions, including Europe, North America, Asia, Africa, and Australia, indicating a global customer base.
2. Europe shows the highest concentration of reviews, suggesting that it is one of the airline's primary markets.
3. North America and Asia also contribute a significant number of customer reviews.
4. The wide geographical spread demonstrates the airline's international operations and diverse customer base.
5. Some countries contribute relatively few reviews, indicating lower passenger volume or lower customer engagement.

Chart 2: Average Rating by Date

Insights

1. Customer ratings fluctuate considerably over time, indicating inconsistent passenger experiences.

2. High ratings are observed throughout the timeline; however, there are also several periods with low ratings.
3. No consistent upward trend in customer satisfaction is visible across the years.
4. The variability suggests that service quality may differ across flights, aircraft, or operational conditions.
5. Continuous monitoring of customer ratings is necessary to identify periods of declining satisfaction and implement corrective actions.

Chart 3: Customer Reviews by Route (Map)

Insights

1. Customer reviews originate from a wide range of international routes, reflecting the airline's extensive global network.
2. European routes show the highest concentration of customer activity, indicating heavy passenger traffic.
3. Several long-haul routes between Europe, North America, Asia, and Australia also receive significant customer feedback.
4. High-density routes generate the majority of customer reviews and should be prioritized for service improvements.
5. Lower-review routes may require additional customer engagement to obtain more representative feedback.

Chart 4: Customer Reviews by Country (Bar Chart)

Insights

1. The **United Kingdom** contributes the highest number of customer reviews, making it the largest source of passenger feedback.
2. The **United States** ranks second but has significantly fewer reviews than the United Kingdom.
3. Australia, Canada, Germany, South Africa, Switzerland, Sweden, China, and France contribute comparatively smaller numbers of reviews.
4. Customer feedback is concentrated in a few countries, particularly the United Kingdom.
5. Countries with fewer reviews may require additional customer participation to improve the representativeness of the analysis.

RECOMMENDATIONS

1. Improve Food & Beverage Quality

- Review customer feedback related to food quality and meal variety.
- Introduce more diverse menu options based on passenger preferences.
- Conduct regular quality checks to maintain consistency across flights.

2. Enhance In-flight Entertainment

- Upgrade entertainment systems on aircraft receiving lower ratings.
- Expand the selection of movies, TV shows, music, and multilingual content.
- Ensure entertainment systems are functioning properly before departure.

3. Improve Seat Comfort

- Prioritize seat upgrades on aircraft with lower seat comfort ratings.
- Increase legroom where feasible and improve seat cushioning, especially on long-haul flights.
- Schedule regular maintenance to ensure seats remain in good condition.

4. Maintain High Cabin Staff Service Standards

- Continue regular customer service and hospitality training for cabin crew.
- Recognize and reward high-performing cabin staff.
- Use customer feedback to identify areas where service can be further improved.

5. Focus on High-Volume Aircraft

- Since aircraft such as the Airbus A320 and Boeing 777 receive the highest number of reviews, prioritize service improvements on these aircraft to maximize customer impact.

6. Improve Customer Satisfaction on Low-Rated Routes

- Analyze routes receiving lower ratings to identify operational issues.
- Address recurring concerns such as delays, food quality, or seat comfort on those routes.

7. Increase Customer Feedback Collection

- Encourage passengers to complete post-flight surveys through email or the mobile app.

- Offer small incentives, such as loyalty points, to increase response rates.
- Gather more feedback for aircraft and routes with fewer reviews.

8. Personalize Services for Different Traveller Types

- Develop services tailored to Business, Solo Leisure, Family Leisure, and Couple Leisure travellers.
- For example:
 - Business travellers may value punctuality and Wi-Fi.
 - Families may appreciate child-friendly meals and entertainment.

9. Improve Data Quality

- Investigate missing or invalid ratings (such as -1 values) before performing future analyses.
- Standardize data collection to improve the accuracy and reliability of reports.

10. Continuously Monitor Customer Satisfaction.

- **Review these KPIs regularly to identify trends and take corrective actions quickly.**

British Airways (BA) should focus on improving food quality, in-flight entertainment, and seat comfort while maintaining its strong cabin staff service. Priority should be given to high-traffic aircraft and routes, as improvements in these areas will benefit the greatest number of passengers. Regular monitoring of customer feedback and proactive service enhancements will help increase customer satisfaction, recommendation rates, and overall brand loyalty.
